

Directions

Prepare Area

PF Wonder Salve is fast acting, so make sure you have control of underlying infection before proceeding. Wash area with saline solution, or soap/water, then dry before each application. Do not use products containing alcohol, iodine, chlorhexidine or hydrogen peroxide to clean wound. Avoid excessive hosing, as this delays wound contraction. Hydrotherapy encourages proud flesh formation. For best results, clean area with water or saline from a squeeze bottle. Dish soap bottles work well. For best results, use less water.

Application - Important!

Stir well before applying. PF Wonder Salve is water-based, so add a few drops of water if the salve has thickened, or begins to dry. It is highly concentrated; a little goes a long way. Apply a thin layer, and allow it to slightly dry before bandaging. To eliminate existing proud flesh, abrade the surface to the point of slight bleeding, then apply a thin layer of salve.

Bandaging

For best results, bandage leg and foot injuries. When bandaging, the use of non-stick telfa pads is recommended.

Bandaging Continued

Disposable diapers may work better for large areas, or foot area. Gauze pads are not recommended, as they stick to the wound.

Bandage with cotton quilt and standing bandage, or cotton padding and flexible self-adherent bandaging tape. Never use self-adherent tape without padding. If you are not comfortable bandaging, PF Wonder Salve works without bandaging. Improper bandaging may cause permanent damage. If wound is infected, change bandage daily first few days. After a couple days, you may taper down to a bandage change every 2-3 days. Do not aggressively scrub scabbed area. Continue wrapping until wound is level with surrounding area. Depending on overall size, and after area is level, apply salve without bandage.

Non-Bandaged Areas

Apply every day to clean, dry area. If product does not fully “slough” when rinsed, it’s fine to leave the residual solution on area, and add second layer. This helps the top layer “slough” better the next day, exposing clean, healthy tissue. PF Wonder Salve forms a protective coating and repels flies.
